AMENDMENTS TO THE CLAIMS

- 1. (Previously Presented) A method of sealing a leaking part or cavity comprising injecting into said leaking part or cavity a grouting composition comprising an alkali metal silicate or an organic silicate, colloidal silical particles, and at least one gelling agent, wherein the composition has a weight ratio of silicate is silicate from about 2:1 to about 100:1.
- 2. **(Withdrawn)** A method for preparing a composition for injection grouting comprising mixing colloidal silica particles, an alkali metal silicate or an organic silicate, and at least one gelling agent, wherein the composition has a weight ratio of silica to silicate from about 2:1 to about 100:1.
- 3. (Withdrawn) A composition for injection grouting comprising colloidal silica particles, an alkali metal silicate or an organic silicate, and at least one gelling agent, wherein the composition has a weight ratio of silica to silicate from about 2:1 to about 100:1.
- 4. (Original) A method according to claim 1, wherein the colloidal silica particles are present in a silica sol having an S-value from about 30 to about 90.
- 5. (Withdrawn) A composition according to claim 3, wherein the colloidal silica particles are present in a silica sol having an S-value from about 30 to about 90.
- 6. **(Original)** A method according to claim 1, wherein the composition further comprises a hydraulic binder.
- 7. **(Withdrawn)** A composition according to claim 3, wherein the composition further comprises a hydraulic binder.

- 8. (Original) A method according to claim 1, wherein the weight ratio of silica to silicate is from about 3:1 to about 70:1.
- 9. **(Withdrawn)** A composition according to claim 3, wherein the weight ratio of silica to silicate is from about 3:1 to about 70:1.
- 10. (Original) A method according to claim 1, wherein the weight ratio of silicate to silicate is from about 6:1 to about 20:1.
- 11. (Withdrawn) A composition according to claim 3, wherein the weight ratio of silica to silicate is from about 6:1 to about 20:1.
- 12. (Original) A method according to claim 1, wherein the silica particles have a relative standard of deviation of the particle size distribution lower than about 15% by numbers.
- 13. (Withdrawn) A composition according to claim 3, wherein the silica particles have a relative standard of deviation of the particle size distribution lower than about 15% by numbers.
- 14. (Original) A method according to claim 1, wherein the gelling agent is an alkali metal salt.
- 15. (Withdrawn) A composition according to claim 3, wherein the gelling agent is an alkali metal salt.
- 16. (Withdrawn) A method according to claim 2, wherein the composition further comprises a hydraulic binder.
- 17. (Withdrawn) A method according to claim 2, wherein the weight ratio of silicate is from about 3:1 to about 70:1.

- 18. (Withdrawn) A method according to claim 2, wherein the weight ratio of silica to silicate is from about 6:1 to about 20:1.
- 19. (Withdrawn) A method according to claim 2, wherein the silica particles are present in a silica sol having an S-value from about 30 to about 90.
- 20. (Withdrawn) A method according to claim 2, wherein the silica particles have an average particle diameter ranging from about 7 to about 50nm.
